TABLE S12c

GEMINI 4 ARGON CROSS-MODEL AGREEMENT CALIBRATION

Clustering	Score	Brier	Log loss	ECE
Leiden	Raw agreement	0.2671	4.2733	0.2420
Leiden	Logistic recalibration	0.2095	0.6089	0.0949
Leiden	Development constant	0.2523	0.6977	0.0662
FlowSOM	Raw agreement	0.3072	4.7653	0.2720
FlowSOM	Logistic recalibration	0.2877	0.7786	0.2710
FlowSOM	Development constant	0.2799	0.7578	0.1734
SpatialSort	Raw agreement	0.3865	4.7954	0.3571
SpatialSort	Logistic recalibration	0.2342	0.6669	0.0850
SpatialSort	Development constant	0.2343	0.6633	0.0772
PIXIE	Raw agreement	0.3558	4.2403	0.3847
PIXIE	Logistic recalibration	0.2197	0.6310	0.1469
PIXIE	Development constant	0.2340	0.6610	0.1345

Lower scores are better. These are equal-test-region metrics on hash-held-out evaluation clusters, not the full benchmark population. Development uses disjoint clusters and regions. Agreement support has denominator four. This is retrospective within-donor reference-agreement calibration, not repeatability, native model confidence or biological certainty.
